- Statistical Theory

Probability Theory

Use prob. to do inference

Talk to Thomas Anastas

Prof.

Proficient in R
Knowledge of C++

In math,

$$x^2 + y^2 = 1$$

trace

model dynamics

$$\alpha(t) = (\cos t, \sin t)$$

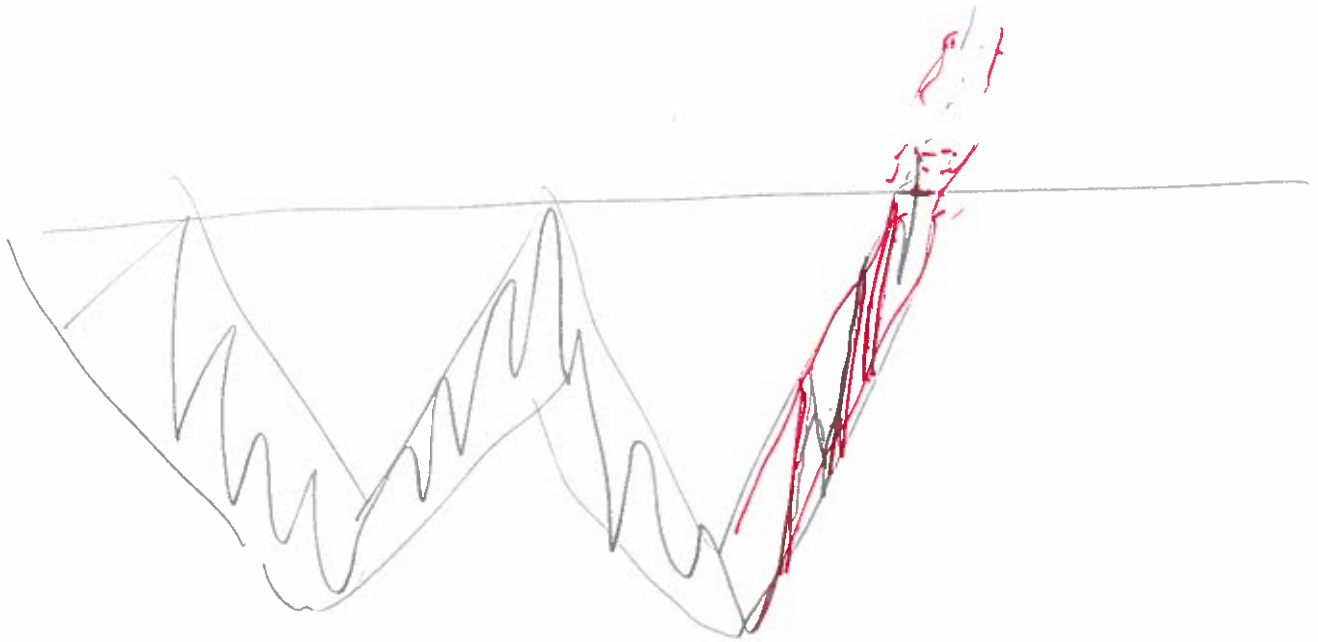

$$\beta(t) = (\cos 2\pi t, \sin 2\pi t) \text{ as } t \in [0, 1]$$

$$\gamma(t) = (\sin t, \cos t)$$

daily data

weekly data

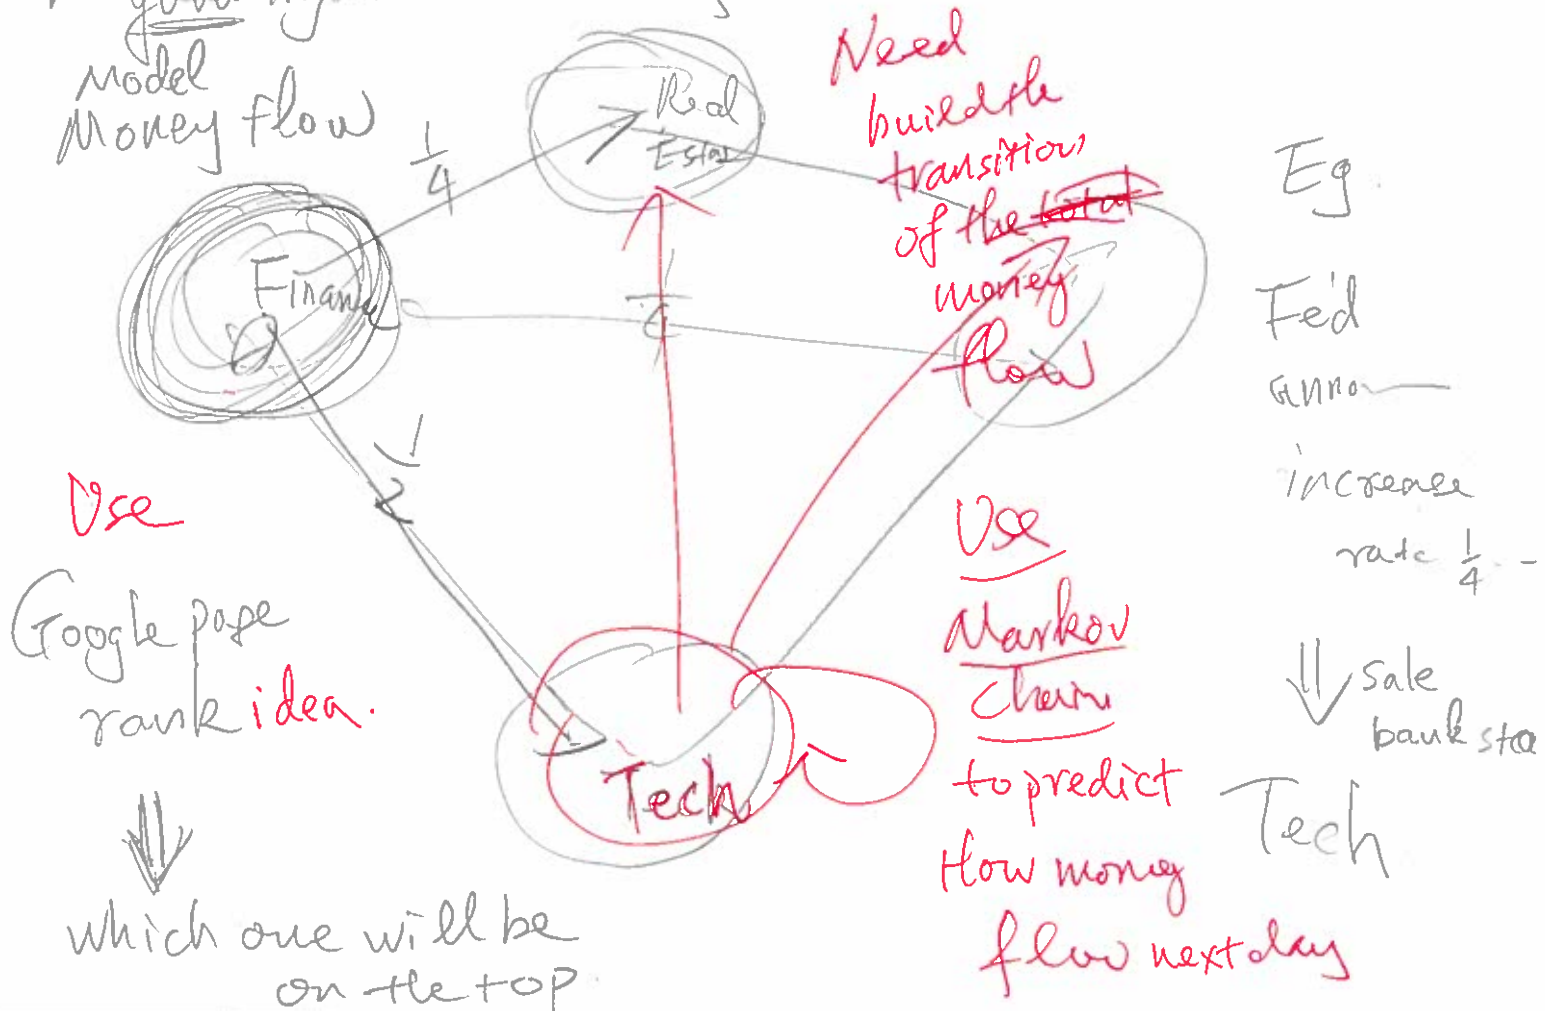

High freq trading
Nanosecond
+ Statistics } means
millions of money
to by fast computer

We are doing: understand the
battle of ~~the~~ based
on statistics.

★ Design good Algorithm trading

Model
Money flow

Need build the transition of the total money flow

Use Markov chain to predict flow money flow next day

Eg.
Fed
Announce
increase
rate $\frac{1}{4}$ -
↓ sale bank stock
Tech

Which one will be on the top.

(3)

Eg: Say you predict money will go to the strongest
Tech sector \Rightarrow Then choose in this sector
 \Downarrow
infd method.

L14. ~~Search~~ search:

- ① Orderbook abuse by HFTs
- ② sector relationships
- ③ Top down macro to micro trading
- ④ End of day trading inefficiencies
